

Agenda for September 2026 Immunisation Advisory Committee meeting

7 August 2026

Information on what the Immunisation Advisory Committee will be considering at its upcoming meeting in September 2026.

Matters Arising

RSV Programme overview

The Committee will discuss the potential approach to an RSV immunisation programme in New Zealand.

Recombinant zoster vaccine (Shingrix) for immunocompromised people at increased risk of shingles

The Committee will discuss widening access to the recombinant zoster vaccine for immunocompromised people who are at increased risk of shingles and its complications. The Committee previously considered this topic at their [March 2024](#) and [June 2025](#) meetings. Further advice will be sought to confirm the eligibility criteria.

Applications

Human Papillomavirus 9-valent vaccine (Gardasil 9) widened access

The Committee will discuss an application to widen access for the Human Papillomavirus 9-valent (HPV) vaccine for people living with HIV who are aged 9 – 45 years.

Advisory meeting agenda setting

The scheduling and agenda setting process for advisory meetings considers multiple factors. We aim to balance the relative priorities of clinical advice needed across indications, the factors for consideration for each application (for example unmet health need), the time since applications were received and the internal and advisor resource available to support each meeting.
